It's a hosted Learning Management System (LMS)!

Students get a concise page to organize, take and track their own training courses. Bookmarking allows for an interrupted session to be restarted right where it was left.

Trainers can assign courses to students, obtain tracking information and monitor progress. Courses and students can be organized into groups for easier course assignment.

Administrators can control the LMS including deciding on passing percentages for Post Tests and the number of tries for a student to pass assessments.

It is a streaming video portal!

All courses are available for streaming; think of it as your virtual DVD library. Use the video as you might a DVD, but without the inconvenience.

It is a source for Trainers!

Trainers can use the entire library for either classroom training or for managing eLearning for employees. Video content can be downloaded to play locally at a higher quality level. This is a perfect solution where one is presenting on a large screen monitor or when limited Internet bandwidth is available.

General Features

- Contains both DVD style and interactive eLearning courses. DVD style is like watching a DVD; these courses also include tracking and a completion certificate. Interactive courses are lesson oriented self-paced courses with pre-tests, post-tests, and interactive exercises.

- For self-study and eLearning, students have a central "Your Courses" to organize and control their selected and/or assigned courses.

- For classroom, trainers can play video and video segments as they now do with DVDs.

- End user management can control ArcLearn using administrative functions on the web site, and can view reports to review ArcLearn activity.

- Supports video assets including Microsoft video, Adobe Flash video, and Apple HLS. Supports video in high quality (full screen DVD quality).

- Internet based using one's browser to access. Compatible with PCs, Macintosh, Android and iOS.

Features for Students

- The student has an attractive platform for taking self-paced courses.

- Can select courses from the entire list of licensed courses as necessary.

- Learning can be paced to the student's speed requirements. Courses are broken into lessons and can be paused and restarted at any time in the future. Students can re-start courses as they see fit with ArcLearn keeping track of where they left off (even within a video). Next and Previous buttons on course pages give the student the ability to proceed at their own pace.

- Each student has a list of "Your Courses" which are either selected for the student by the student himself or by a training coordinator or supervisor. Courses are categorized as a) Personal Selection, b) Required, and c) Recommended.

- The "Your Courses" will provide information such as a) course title, b) the selection type, c) product category, d) the current status (successfully completed, in-progress, not started, unsuccessfully completed), e) date selected, f) target completion date or actual completion date, and e) test scores. The student will be able to review and sort the list as might be necessary.

- The "Your Courses" list is the jumping off point to start or resume any course.

Features for the End User Management

- Reports are available

    - Course usage by person within date range
    - Course usage by course within date range
    - Listing of authorized users
    - List of currently licensed courses
    - Incomplete courses added by date

- Options are available

    - Maximum number of assessment questions.
    - Minimum percent for assessment successful completion

- Number of tries for assessment completion.
- Coordinator e-mail address (for student help).

- Add new individual employees.

- Upload lists of employees for mass registration with an excel spreadsheet. The only information required is the employee name and e-mail address.

- Customized end user organization branding to include logo, company name, and your own student page message.

- Manage the identification of administrative users (trainers and administrators)

Features for Training Coordinators

- The Course Assignment Tool will allow the coordinator to make temporary and permanent groups of employees and courses. Using common "list picker" widgets, the coordinator can assign groups of courses to groups of students easily and quickly. With the assignment, an optional e-mail is sent to each student. The student then will see the courses in his or her own Your Courses list.

- The coordinator will also have a Student Information Tool to list a subset or all students. The coordinator will have some limited management of each student's courses including the ability to remove as necessary. The coordinator will have course properties available which will be handy when discussing course results with a student.

ArcLearn in the Classroom

- Support your classroom presentations using full program video, chapters and clips.

- Either stream content from the Internet or play locally from your PC.

- Insert video links into documents, e-mails, PowerPoint and course authoring tools.

- Play DVD quality video for projection and large screen display. Downloaded video is four times the quality of high speed Internet.

- Download support materials in digital formats including Leaders Guides, PowerPoint aides, and Student handouts. Availability varies from course to course.

- Supports a roaming trainer. Internet access is not required. Presentations can be completely self-contained on a laptop.
